

# Diabetter

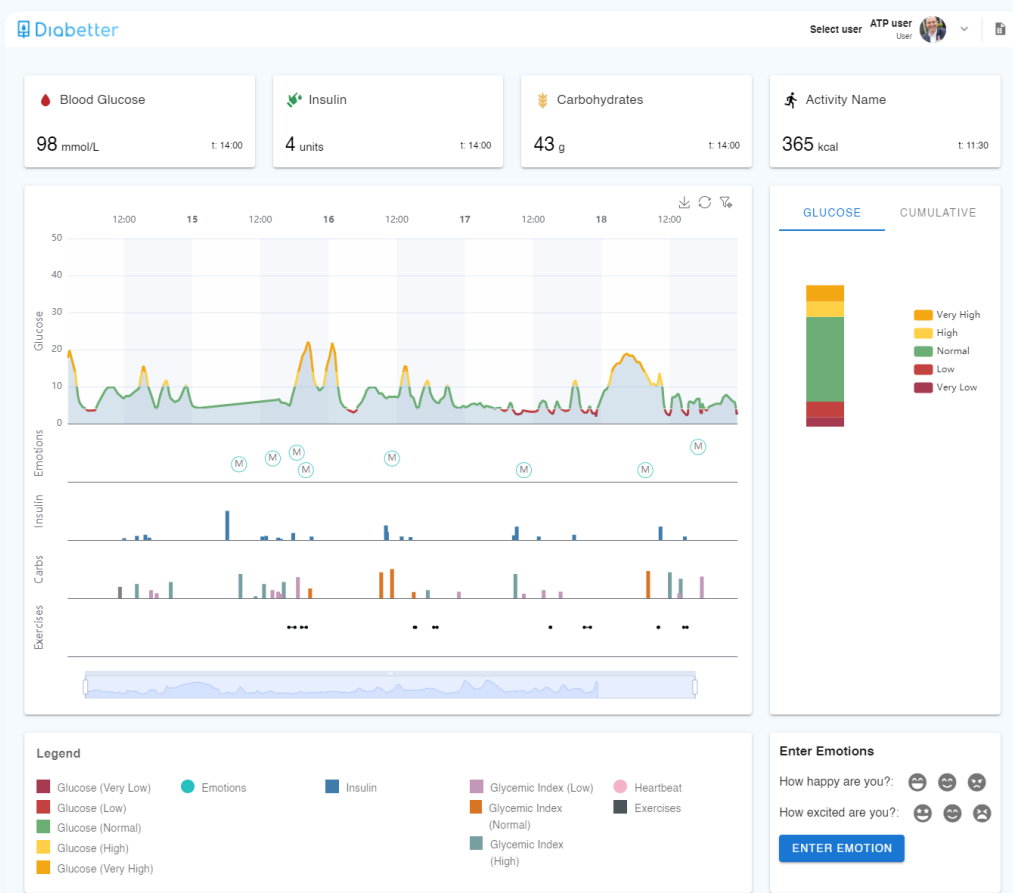

## Problem

- Diabetes type-1 patients have to track a lot of their habits
- No standardized way to track food, exercise, emotion, glucose & insulin activity
- Hard to get insights into their activity history in relation to their blood glucose levels

## Solution

- One dashboard to view all activity history
- Integrations with third-party services such as Google Fit, Eetmeter and Nightscout
- Querying on past activities to see correlations between activity data

## Overview

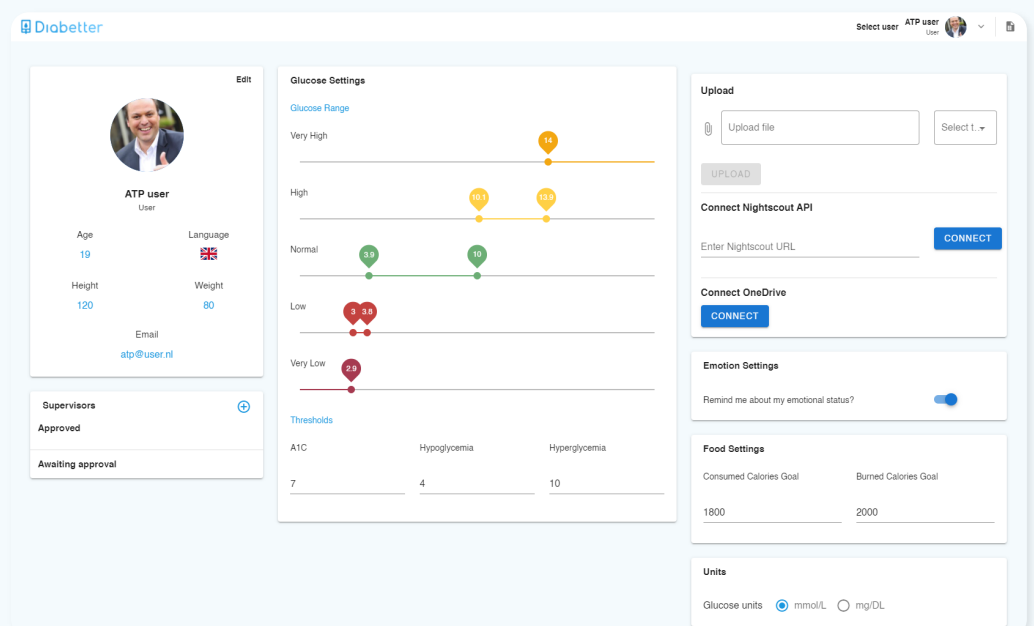

Dashboard view of a user with activities for 1 week

## Technology

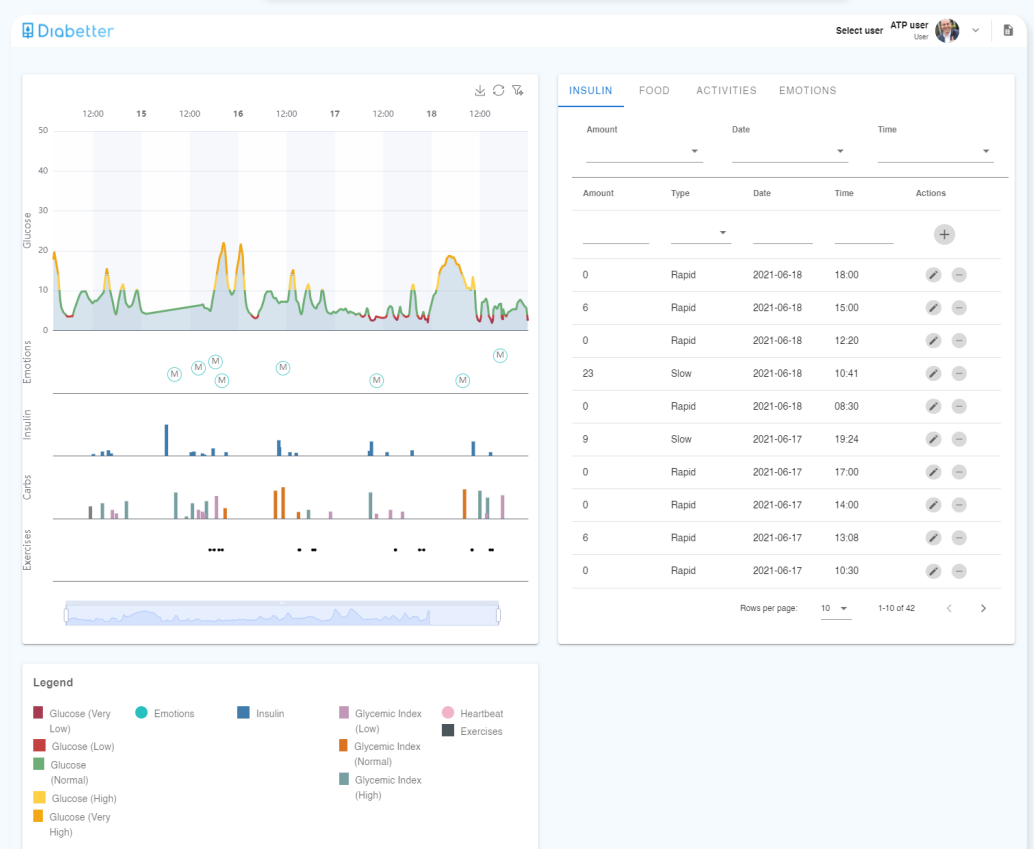

- Vue for performant and simple interface
- ECharts for beautiful and powerful graphs
- Node.js and TypeScript for type-safe back-end infrastructure
- GameBus API for activity storing & retrieving

## User profile

Profile page for changing settings and uploading files

## History

History page with past activities
